1.0 Introduction

The U.S. Environmental Protection Agency's (EPA) final Coal Combustion Residuals (CCR) Rule 40 CFR §257 and Michigan's Part 115 Solid Waste Management, of the Natural Resources and Environmental Protection Act, 1994 PA 451 (Part 115), establishes a comprehensive set of requirements for the management and disposal of CCR (or coal ash) in surface impoundments by electric utilities. The former Erickson Power Station (Erickson or Site) was an electrical power generation facility located at 3725 South Canal Road in Delta Township, Eaton County, Michigan owned and operated by Lansing Board of Water & Light (BWL) (**Figure 1**). Erickson contained a single coal-fired generator that was capable of producing 165 megawatts of electricity. It ceased operations in November 2022. Erickson had three CCR impoundments: the Forebay, Retention Basin, and Clear Water Pond (CWP) (**Figure 2**). The three CCR impoundments were physically closed by removal of CCR in 2024, with ongoing groundwater monitoring.

The BWL former CCR surface impoundments, Forebay, Retention Basin, and CWP, are not licensed under Part 115 because Michigan Department of Environment, Great Lakes, and Energy (EGLE) denied BWL's permit application; however, BWL continues to work with EGLE and submits compliance documentation for EGLE as if the impoundments were permitted under an operating permit. BWL implements both the federal and state compliance groundwater monitoring programs concurrently to comply with both the federal CCR Rule and Part 115 solid waste regulations. The Part 115 permit requirements include approval of a Hydrogeologic Monitoring Plan (HMP). The current HMP was approved by EGLE and describes the monitoring network, sampling and analysis plan, and data validation and statical procedures for the monitoring program to comply with Part 115 solid waste rules (HDR, 2024c).

BWL completed numerous tasks in 2025 to characterize the impact to groundwater and progress toward selecting a remedy for corrective action. In 2025, BWL completed the following tasks listed below:

- Updated the Monitoring Well Installation Report and Groundwater Monitoring Network System Certification, both published on May 15, 2025.
- Performed a Tier I Evaluation for Monitored Natural Attenuation (MNA) of the site contaminants of concern (COCs) related to the former CCR surface impoundments.
- Developed and implemented a sampling strategy for collecting soil, groundwater, and well sediments to support subsequent Tier II MNA evaluation and bench tests to evaluate the treatability of groundwater in-situ via various potential reagents.
- Completed the installation of six monitoring wells (MW-7D, MW-19A, MW-19B, MW-19C, MW-19D, and MW-20) for groundwater plume delineation.
- Completed two semiannual assessment monitoring events and subsequent analysis in February and August 2025.
- Performed sampling and analysis for higher frequency background monitoring for newly installed MW-17 series, MW-18 series, and MW-19 series multi-level wells.
- Completed site restoration efforts for the former Forebay, Retention Basin, and CWP following the removal of CCR source materials.

This Annual Groundwater Monitoring Report presents these activities, and the sampling and analysis completed in 2025.

2.0 Facility Description

Erickson was an electrical power generation facility located at 3725 South Canal Road in Delta Township, Eaton County, Michigan, owned and operated by the Lansing Board of Water & Light (BWL) (**Figure 1**). During active operations, a single coal-fired generator was capable of producing 165 megawatts of electricity and CCR was stored in dewatering tanks (hydro-bins). After the majority of the CCR was removed from the waste stream at the hydro-bins, flow was discharged into three former CCR impoundments in sequence: the Forebay, Retention Basin, and Clear Water Pond (CWP) (**Figure 2**).

Erickson ceased coal-fired power generation operations on November 27, 2022. The plant pipelines were washed down and CCR waste disposal ceased to the CCR impoundments on December 29, 2022. The non-CCR stormwater flow to the impoundments ceased January 3, 2023. A CCR removal contractor was selected and mobilized to the site in February 2023 to begin dewatering operations for the three impoundments. The water removed from the surface impoundments was treated onsite, monitored, and discharged into nearby Lake Delta in compliance with a National Pollutant Discharge Elimination System (NPDES) permit. Coal ash and liner material was removed and transported offsite to Granger Wood Street Landfill from all three impoundments. Ash removal verification efforts for the Forebay, Retention Basin, and CWP were completed and the removal activities are documented within the CCR Removal Report published on November 4, 2024 and approved by EGLE on November 8, 2024.

Figure 2. Former Erickson Power Station Facility Layout

2.1 Hydrogeology

The three former CCR impoundments at Erickson are in areas underlain with unconsolidated clay, silt, sand, and gravel of glacial origin that rest upon approximately 10,000 feet of consolidated bedrock sediments composed of limestone, shale, siltstone, sandstone, salt, and gypsum. Depth to the uppermost groundwater under the impoundments is determined to be approximately 2 to 17 feet below surface. The bedrock surface is between 36 and 61 feet below surface and the upper glacial aquifer thickness is between 25 and 53 feet thick. The groundwater flow direction is east directly under the former CCR impoundments and has a consistent flow direction throughout the year (**Appendix A**). Further east, closer to Creyts Road, the groundwater flow direction is west, towards the wetland along the BWL eastern property boundary. Groundwater flow turns towards the north following Carrier Creek, consistent with the Carrier Creek Subwatershed topography. The glacial and bedrock aquifers follow the same flow directions (**Appendix A**).

2.2 Monitoring Well Network

The certified monitoring system for the former CCR impoundments includes the following wells (**Figure 3**):

- Glacial aquifer background (upgradient) wells: MW-1, MW-4, MW-11, and MW-12.
- Glacial aquifer waste boundary compliance wells: MW-2, MW-5, MW-6, and MW-14.

2.2.1 Additional Wells

The certified groundwater monitoring system includes additional wells installed to characterize the aquifer and evaluate groundwater further downgradient of the impoundments in response to identification of concentrations of constituents at statistically significant levels (SSLs) over groundwater protection standards (GPS) in the impoundment compliance wells (**Figure 3**):

- Glacial aquifer wells: MW-7, MW-7C, MW-8, MW-9, MW-10, MW-13, MW-15, MW-16A, MW-16B, MW-17A, MW-17B, MW-17C, MW-18A, MW-18B, MW-19A, MW-19B, MW-100A, MW-100B.
- Bedrock aquifer background (upgradient) wells: MW-11B, MW-12B
- Bedrock aquifer wells: MW-7B, MW-7D, MW-16C, MW-16D, MW-17D, MW-17E, MW-18C, MW-18D, MW-19C, MW-19D, MW-100C, and MW-100D
- Wells included for water level only: MW-20

Five monitoring wells (MW-19A, MW-19B, MW-19C, MW-19D, and MW-20) were installed in May 2025 located at the northern end of the BWL property boundary for plume delineation (**Figure 3**). These new monitoring wells were sited north of the wetland to avoid wetland disturbance and associated long permitting timelines for work in a wetland. Additionally, a shallow bedrock aquifer monitoring well (MW-7D) was installed at the MW-7 well series in September 2025 (**Figure 3**). While monitoring well MW-7B had been monitoring groundwater in the bedrock aquifer, monitoring well MW-7D was installed to evaluate any difference in groundwater quality between shallow bedrock (MW-7D screened between 69 and 74 feet below

ground surface) and deeper bedrock groundwater quality (MW-7B screened between 110 and 120 feet below ground surface). Details regarding the construction of these newly installed wells are included in **Table 1** below. These wells will be included in a revision to the Monitoring Well Installation Report and Groundwater Monitoring Network System Certification in 2026. No wells were repaired or abandoned in 2025.

3.0 Monitoring

3.1 Frequency

Table 2 provides the well identification number, well location, and the dates and purpose of the samples collected. Assessment monitoring for Erickson in 2025 was conducted in January/February and August.

In May 2025, four new monitoring wells (MW-19 series A-D) and a piezometer to validate the groundwater contours for the site (MW-20) were installed. Well MW-7D was installed in September 2025 to monitor conditions in the bedrock aquifer. As new wells are added to the monitoring system, they are initially sampled on a 5-week frequency for a total of eight rounds to establish background in each well per §257.94(b). This expedited frequency develops the statistical strength recommended before using the data in the semiannual sampling events, provided the evaluation of the data for autocorrelation is acceptable. After the initial eight sampling events are completed, semiannual sampling aligns with the above sampling schedule. To date, seven sample events have been completed for the MW-19 series wells and two sample events have been completed for well MW-7D.

Additional sampling events for 2025 included the collection of additional groundwater samples from select wells to further assess in-situ treatability and the MNA remedial alternative.

[1]On this monitoring date, the monitoring location was scheduled for monitoring; however, the monitoring point was inaccessible due to ponded water and the well was unable to be sampled.

*Data analysis from these sample events are incomplete.

3.1.1 Water Levels and Sample Collection

Water levels were collected in each well following the Groundwater Level Monitoring Standard Operating Procedure (SOP) for Erickson (HDR, 2024b). Water levels were measured before purging the wells began. Wells were purged with a peristaltic pump until field parameters (pH, turbidity, conductivity, dissolved oxygen, temperature, and oxidation reduction potential) stabilized. The results of field measurements were recorded on a field data form, which is maintained as part of the field records. After field parameters stabilized, samples were collected and tested for the parameters listed in **Table 3**. For quality control, one field duplicate and one equipment blank sample were collected on each sampling date for each sampling event. Samples were shipped under Chain of Custody to Eurofins Laboratories of Cleveland, Ohio.

3.1.2 Analytical Testing

Samples collected for background monitoring and assessment monitoring events were analyzed for the parameters listed in **Table 3**. In addition to the required list in **Table 3**, on occasion, wells were analyzed for general water quality parameters including alkalinity, magnesium, potassium, and sodium.

3.1.3 Data Validation and Data Management

Data validation and data management tasks were performed per the Data Management and Statistical Procedures Plan for Compliance with the Coal Combustion Residuals Rule (HDR, 2020a). Data validation was conducted to eliminate data that did not meet validation criteria and designate a data qualifier for data quality limitation discovered.

Samples and quality control (QC) were reviewed and evaluated, and no samples were rejected. Quality Control analyses were within reportable limits; however, when QC was outside limit controls, samples were reported as estimated. Field and laboratory precision and accuracy goals were nearly met for all samples analyzed. Where failures of field and laboratory precision and accuracy were outside of control limits, data was qualified as necessary. Data analyses required minimal qualifications, and data were usable, even when qualified. A summary table of the lab results may be found in **Appendix C**. Laboratory reports and data validation reports for the sampling completed in 2025 may be found in **Appendix D.**

4.0 Monitoring Results

4.1 Water Levels and Groundwater Flow Direction

Water levels for the former Erickson Power Station are provided in **Table 4**. Groundwater beneath the area of the impoundments is between 852 to 876 feet amsl. Groundwater elevations fluctuate approximately 1 to 6 feet throughout the year and are higher in the spring and lower in the fall (**Figure 4**). Based on the potentiometric contours, the groundwater flow under the former CCR impoundments is generally east, however flow farther east of the wetlands at MW-16 appears to be flowing west, back towards the BWL property and then following the surface topography towards the north. Groundwater flows north under the wetland area within both the glacial and bedrock aquifers consistent with the Carrier Creek Subwatershed topography. Additional information detailing the groundwater flow direction at former Erickson Power Station may be found in the revised Groundwater Monitoring Network System Certification for Erickson Power Station published in May 2025 (HDR, 2025b).

Water levels in the multi-level glacial and bedrock wells is inconsistent between the sets (**Figure 4**). As shown in **Table 4**, glacial wells MW-11 and MW-12 have higher water levels than the paired bedrock wells MW-11B and MW-12B (approximately 9 feet and 4 feet higher, respectively), indicating a downward vertical gradient. Similarly, groundwater elevations in the MW-16 series decrease with well depth, indicating a downward vertical gradient, except for bedrock well MW-16D which is hydraulically disconnected from the other wells at Erickson. In the MW-100 well series, groundwater elevations in MW-100B and MW-100C are similar, while MW-100A is one foot higher and MW-100D is also one foot higher. These wells are all located farther from and surrounding the wetland where groundwater converges from both sides and turns and flows north consistent with the Carrier Creek Subwatershed topography. Wells that are closer to or within the wetland and where groundwater converges and flows north, bedrock well MW-7B has historically had a slightly higher water level than glacial paired well MW-7, indicating an upward vertical gradient, however, data collected since its installation in 2022 indicate that this trend may be seasonally dependent as the gradient has been inconsistent. Well MW-7D is not yet surveyed, therefore vertical groundwater flow gradient could not yet be determined for this well. Groundwater elevation data for the MW-17 series wells indicate a downward vertical gradient, except for MW-17D which appears to have an upward gradient from the shallow bedrock to the glacial aquifer. Additionally, the vertical gradient of the shallow glacial wells MW-17A and MW-17B may be seasonally dependent as MW-17B has been observed at slightly higher elevations than that of MW-17A during Q1 and Q2 2025. Likewise, MW-18 series wells have also indicated a downward vertical gradient, with an upward vertical gradient being observed between MW-18A, -18B, and -18C during of 2025. Groundwater elevation data collected from the MW-19 series wells indicate an upward gradient within this well series farther north. Groundwater elevation in wells MW-19B and MW-19C are similar and both are approximately 1 foot higher than well MW-19A. Groundwater elevations in well MW-19D is approximately a foot higher than MW-19B and MW-19C and approximately two feet higher than well MW-19A.

Because the groundwater elevations differed between glacial wells and bedrock wells, two separate sets of potentiometric contour maps were developed, one for wells screened in the glacial aquifer and one for the wells screened in the shale/sandstone bedrock aquifer. Potentiometric surface maps were developed for the glacial and bedrock aquifers for the January, May, and August 2025 water level measurement dates. Maps displaying the groundwater elevations at the wells and the groundwater contours and are provided in **Appendix A**.

The potentiometric surface maps and hydrographs indicate that monitoring wells MW-1, MW-4, MW-11, MW-12 are located upgradient in the glacial aquifer and wells MW-11B and MW-12B are upgradient in the bedrock aquifer relative to the former Forebay, Retention Pond, and CWP and are appropriate to represent background water quality.

Site-specific Background Values and Groundwater Protection Standards for the glacial and bedrock aquifers may be found in **Appendix B**. A table summary of the analytical data is provided in **Appendix C** and laboratory reports are provided in **Appendix D**.

Assessment Monitoring Event – January/February 2025

Thirty-six (36) wells were sampled during January/February 2025 assessment monitoring event as presented in **Table 2**. The following wells had concentrations of one or more constituents that exceeded GPS: MW-2, MW-3, MW-5, MW-6, MW-7, MW-7C, MW-14, MW-16A, and MW-16D. In accordance with Michigan Rule R 299.4441, downgradient well concentrations were statistically evaluated to determine if constituents are detected at SSLs above the GPS. To determine if an exceedance of a GPS value was statistically significant, the 95% lower confidence limit (95LCL) was calculated for each of the downgradient wells. Statistical output files are in **Appendix E**.

Glacial Aquifer

Monitoring wells MW-2 and MW-5 had SSLs of boron, calcium, lithium, and sulfate over the GPS (**Table 5**). In previous assessment monitoring events, wells MW-2 and MW-5 also had SSLs of TDS above the GPS; however, the 95LCL dropped below the GPS after the February 2025 sample event. Monitoring wells MW-6 and MW-14 had SSLs of boron and lithium over the GPS, and well MW-7 had SSLs of boron, lithium, and molybdenum over the GPS (**Table 5**). Well MW-7C had SSLs of boron, calcium, lithium, molybdenum, sulfate, and TDS over the GPS (**Table 5**). Well MW-3 continued to demonstrate SSLs of boron, calcium, lithium, molybdenum, sulfate, and TDS over the GPS (**Table 5**).

Bedrock Aquifer

After the January/February 2025 assessment monitoring event monitoring well MW-16D continued to demonstrate an SSL of boron over the GPS (**Table 6**).

Assessment Monitoring Event – August, September 2025

Thirty-six (36) wells were sampled during August 2025 assessment monitoring event as presented in **Table 2**. MW-17 and MW-18 series wells were installed and sampled concurrently; however, due to seasonal inundation, the 8th background sampling event for MW-17 series wells were delayed from their scheduled completion during the August 2025 sampling event. As shown in **Table 2** background sampling events for MW-17 series wells were completed in October, November, and December 2024 and January, February, July, August, and September 2025. Therefore, this section represents the LCL values calculated after the August 2025 assessment monitoring event for all wells except the MW-17 series wells, which were completed after the September 2025 sampling event.

The following wells had concentrations of one or more constituents that exceeded GPS: MW-2, MW-3, MW-5, MW-6, MW-7, MW-7C, MW-14, MW-16A, MW-16C, MW-16D, MW-17A, MW-17B, MW-17C, MW-18A, MW-18B, MW-18C, and MW-18D. In accordance with Michigan Rule R 299.4441, downgradient well concentrations were statistically evaluated to determine if constituents are detected at SSLs above the GPS. To determine if an exceedance of a GPS value was statistically significant, the 95% lower confidence limit (95LCL) was calculated for each of the downgradient wells. Statistical output files are in **Appendix E**.

Glacial Aquifer

Wells MW-2 and MW-5 had SSLs of boron, calcium, lithium, and sulfate over the GPS (**Table 9**). In previous assessment monitoring events, wells MW-2 and MW-5 also had SSLs of TDS above the GPS; however, the 95LCL dropped below the GPS after the February 2025 sample event and remained under the GPS for the August 2025 sample event. Wells MW-6 and MW-14 had SSLs of boron and lithium over the GPS, and well MW-7 had SSLs of boron, lithium, and molybdenum, over the GPS (**Table 7**). Well MW-7C had SSLs of boron, calcium, lithium, molybdenum, sulfate, and TDS over the GPS (**Table 7**). Well MW-3 continued to demonstrate SSLs of boron, calcium, lithium, molybdenum, sulfate, and TDS over the GPS (**Table 7**). After achieving enough sample events to be statistically significant, wells MW-17A, MW-17B, MW-17C, MW-18A, and MW-18B demonstrated SSLs of boron and lithium over the GPS (**Table 7**). Additionally, wells MW-17A and MW-17C demonstrated SSLs of sulfate above the GPS and MW-17C demonstrated an SSL of TDS above the GPS (**Table 7**).

Bedrock Aquifer

After the August 2025 sample event three bedrock wells had new SSLs identified for the first time. Monitoring well MW-16C had an SSL for calcium above the GPS (**Table 8**). Well MW-16D continued to demonstrate an SSL of boron over the GPS during the January/February 2025 assessment monitoring event (**Table 8**). Wells MW-18C and MW-18D had SSLs above the GPS for lithium and additionally well MW-18C had SSLs for calcium, sulfate, and TDS (**Table 8**); however, these constituent concentrations were decreasing over the 9 sampled events (October 2024 to August 2025). BWL will be reviewing data for a potential alternate source. No SSLs were observed for wells MW-17D or MW-17E after completing their 8th sample event in September 2025.

Table 8. SSLs in Bedrock Wells– Calculated through the August 2025 Assessment Monitoring Event

MW-16C	95% LCL	-	70	-	-	-
MW-16D*	95% LCL	4.5	-	-	-	-
MW-18C	95% LCL	-	140	0.076	340	820
MW-18D	95% LCL	-	-	0.059	-	-

*An ASD was submitted to EGLE July 2024 for the SSL observed within this well.
"-" Denotes the LCL did not exceed GPS along with wells not listed.

Multiple lines of evidence have indicated that the SSL of boron in well MW-16D is naturally occurring. Similarly, due to its upgradient location within the MW-16 series, downward vertical gradient for wells within the series (except MW-16D which is hydraulically disconnected), observed calcium concentrations within wells MW-16A and MW-16B, and lack of detection of exceedances of other constituents known to be migrating from Erickson, the calcium exceedance appears to be same naturally occurring source of calcium observed within the MW-16 series wells. Therefore, an addendum to the July 2024 ASD will be prepared for the calcium SSL in MW-16C.

Background Monitoring Events – May, June, July, August, September, November, and December 2025

Background monitoring events for newly installed MW-19 series wells (MW-19A, MW-19B, MW-19C, and MW-19D) and MW-7D were completed in 2025. Sampling for background monitoring events is shown in **Table 2** and described in **Section 3.1**.

After installation and development of monitoring well series MW-19 in May 2025, they were sampled in May, June, July, August, September, November, and December 2025. Additionally, after the installation and development of well MW-7D in September 2025, this well was sampled concurrently with the MW-19 series wells in September, November, and December 2025. To date, seven sample events have been completed for the MW-19 series wells and three sample events have been completed for well MW-7D. At the time of this report, the full data analysis has not been completed for the December 2025 sampling event for the MW-19 series wells and MW-7D and the wells have not yet been sampled for enough events to establish statistical significance.

5.0 Remedy Selection Progress Update

5.1 Plume Delineation

Groundwater monitoring network data currently suggest that the plume is delineated to the east and south of the former CCR impoundments, as stated in previous groundwater monitoring reports. In 2025, delineation efforts to the north have continued.

Data collected from the MW-17 and MW-18 series wells through 2025 (installed in September 2024) indicate that concentrations above GPS for multiple constituents of concern have been identified in both the glacial and bedrock aquifers for these multi-level series wells. Based on the results of the MW-17 and MW-18 series wells, BWL evaluated potential paths in order to continue to delineate the groundwater plume to the north of the MW-18 wells and in May 2025, a new monitoring well cluster (MW-19A, MW-19B, MW-19C, and MW-19D) and new piezometer (MW-20) were installed on the northern Erickson property boundary, north of the wetlands (**Figure 3**). These were sited north of the wetland to avoid wetland disturbance and associated long permitting timelines. To date, seven background sample events have been completed for the MW-19 well series; therefore, these discrete exceedances have not been established as SSLs above GPS due to lacking enough sample events to be considered statistically significant.

5.2 Groundwater Extraction and Treatment Data Collection

To assist in evaluating the feasibility of groundwater extraction and treatment as a viable remedy for site groundwater, a discharge options evaluation is currently underway. This evaluation will provide a high-level assessment of potential discharge pathways for the treated groundwater, including direct discharge to surface water under a National Discharge Elimination System (NPDES) permit, permitted discharge to a publicly owned treatment works (POTW), and discharge back to the subsurface (e.g. through reinjection or infiltration) within the site boundaries. Notably, discharge to the POTW has been ruled out based on feedback from Delta Township staff to BWL, due to volume capacity limitations of the Delta Township wastewater system.

5.3 Monitored Natural Attenuation Data Collection

In 2025, BWL continued to collect and evaluate additional data to continue the MNA investigation. An initial evaluation of the MNA data collected was detailed in Monitored Natural Attenuation Evaluation: Insights from Initial Data (HDR, 2025d). This memo included a Tier I MNA evaluation of boron, which concluded with a recommendation to advance boron to a Tier II MNA evaluation and to complete a comprehensive Tier I MNA Evaluation for the remaining site COCs (calcium, lithium, molybdenum, sulfate, and total dissolved solids). The comprehensive Tier I MNA evaluation for all site contaminants was performed and drafted in the second half of 2025 and the associated report is anticipated to be finalized in the first quarter of 2026.

Additionally, a Tier II MNA evaluation is currently in progress. Well solids were collected from 13 site monitoring wells (MW-3, MW-5, MW-6, MW-7, MW-7C, MW-7D, MW-12, MW-12B, MW-14, MW-18A, MW-18B, MW-18C, and MW-18D) in October 2025 and submitted to Anchor QEA's laboratory in Portland, Oregon. Based on the sample recovery results from the October 2025 samples, additional well solids sample collection was performed in November 2025 at 5 of the

monitoring wells (MW-3, MW-7C, MW-12B, MW-18B, and MW-18C) and also submitted to Anchor QEA. Well solids from 8 of the monitoring wells (MW-3, MW-5, MW-7C, MW-12, MW-12B, MW-14, MW-18B, and MW-18C) were then advanced to a Phase 1 screening analysis, utilizing:

- X-ray fluorescence (XRF)
- Laser-induced breakdown spectroscopy (LIBS)

Based on the Phase 1 screening results, well solids samples from 7 of these wells (MW-3, MW-7C, MW-12, MW-12B, MW-14, MW-18B, and MW-18C) were advanced to Phase 2 analysis, including:

- Selective sequential extraction (SSE)
- Scanning electron microscopy with energy dispersive spectrometry (SEM with EDS)
- X-ray diffraction (XRD)

Three rounds of MNA groundwater samples are additionally being collected from site monitoring wells within the groundwater plume. The first round of these MNA groundwater sampling events was conducted in November 2025, with the second and third rounds of sampling anticipated to be completed in the first quarter of 2026. These groundwater samples will be delivered to Eurofins Laboratories of Cleveland, Ohio for analysis of dissolved metals, sulfide, total organic carbon, nitrate, and nitrite not included in the assessment monitoring program.

5.4 In-Situ Treatability Data Collection

BWL coordinated with Evonik Industries in 2025 to develop a work plan to evaluate the potential for in-situ treatment of site COCs. In September 2025, a 6 kg soil sample was collected from 50-60 feet below ground surface (the screened interval of MW-7C) during the drilling and installation of the new shallow bedrock monitoring well MW-7D. In October 2025, 19 liters of groundwater was collected from MW-7C into two 9.5 liter nitrogen flushed stainless steel canisters, and both the soil and groundwater samples were submitted to ReSolution Partners, LLC's (RSP) lab in Madison, Wisconsin. Subsamples of the groundwater and homogenized soil sample were submitted to CT Laboratories in Baraboo, Wisconsin, for baseline characterization of:

- Boron, lithium, and molybdenum by EPA Method 6010C
- Sulfate by EPA Method 300

In November 2025, RSP commenced a first phase of bench-scale batch testing of the soil and groundwater samples in combination with a variety of different reagents. The purpose of these batch tests are to investigate the efficacy of different reagents and dosages in lowering the aqueous concentrations of site COCs in the presence of the soil and groundwater samples collected from the site. The first phase of batch testing includes two suites of tests: one suite includes reagents (EHC®, MetaFix® I-3, acetic acid) intended to target boron, molybdenum, and sulfate, with the other suite including reagents (TSP, $FeSO_4$, $MnSO_4$, $KHCO_3$, CaO, TMT15®) intended to target lithium. Pending the results of the first phase of batch testing, expected in January of 2026, it will be determined if a second phase of batch testing and/or a field-scale pilot test are warranted to further investigate the potential for in-situ treatability of site COCs in groundwater.

5.5 Next Steps

BWLs efforts to install additional monitoring wells offsite have been unsuccessful as all adjacent landowners have not allowed the installation of monitoring wells offsite of the BWL property, aside from the 100-series monitoring well cluster installed in May 2023. Nevertheless, BWL has continued to install wells along their property boundaries to continue to evaluate the potential extent of contamination. Data collected from wells along the eastern, western, and southern boundaries of the site suggest the plume is contained within the boundaries of wells in these directions and data collected from wells along the northern property, although limited, suggest that the boundaries of the plume has been identified.

The following activities are proposed to be completed or initiated in the next 6-month period:

- Continue semiannual groundwater assessment monitoring;
- Continue 5-week frequency monitoring for wells undergoing background monitoring;
- Evaluation of potential alternate sources of lithium exceedances at the MW-18 series bedrock monitoring wells,
- Update of the site background threshold values (BTVs) with data collected through the first semiannual assessment monitoring event in 2026,
- Create an addendum to the July 2024 ASD for the calcium SSL in MW-16C.
- Continue the tiered MNA evaluations to assess viability of MNA as a remedial option;
- Continue the in-situ treatability data collection;
- Update the groundwater flow and transport model and run simulations to compare the effectiveness of the remedial strategies;
- Continue analysis of results obtained from multi-level well series MW-19 to confirm plume delineation efforts

BWL will be making efforts to comply with both State and Federal regulations concurrently.

6.0 Summary

The following observations are based on CCR Rule compliance groundwater monitoring program development between in 2025:

- Four new monitoring wells (MW-19A, MW-19B, MW-19C, and MW-19D) and one water level monitoring piezometer (MW-20) were installed in May 2025 along the north and northeast of the former Erickson property.
- One new bedrock monitoring well to monitor shallow bedrock conditions (MW-7D) was installed in September 2025 clustered with the other MW-7 series wells.
- Assessment monitoring for the first half of 2025 was completed in January and February for thirty-six (36) wells. Monitoring data was statistically evaluated, and SSLs above the GPS were observed at MW-2, MW-3, MW-5, MW-6, MW-7, MW-7C, and MW-14 for lithium and boron. Additionally, SSLs above the GPS were observed at MW-2, MW-3, MW-5, and MW-7C for calcium and sulfate, in MW-7 for molybdenum, and in MW-3 and MW-7C for molybdenum and TDS. These wells are all glacial wells.
- Assessment monitoring for the second half of 2025 was completed in August for thirty-six (36) wells. Monitoring data was statistically evaluated, and SSLs above the GPS were observed at MW-2, MW-3, MW-5, MW-6, MW-7, MW-7C, MW-14, MW-18A, and MW-18B for lithium and boron. Additionally, SSLs above the GPS were observed at MW-2, MW-3, MW-5, and MW-7C for calcium and sulfate, in MW-7 for molybdenum, and in MW-3 and MW-7C for molybdenum and TDS. These wells are all glacial wells. SSLs above the GPS for wells within the bedrock aquifer were observed for MW-18C for calcium, lithium, sulfate, and TDS, and in MW-18D for lithium only.
- Glacial monitoring well MW-16A had SSLs of chloride and TDS over GPS and bedrock well MW-16D had SSLs of boron over GPS. Additionally, an SSL of calcium over GPS at bedrock well MW-16C was observed following the August 2025 assessment monitoring event. Groundwater flow direction at the site does not indicate that these SSLs are indicative of impact from the former Erickson CCR impoundments. Data collected this year at well MW-16D continues to indicate that this well is not hydraulically connected to the currently established well network at Erickson Station.
- Well series MW-17 completed enough monitoring events to achieve statistical significance in September 2025. Monitoring data was statistically evaluated and SSLs above the GPS were observed in wells MW-17A, MW-17B, and MW-17C for boron and lithium. Additionally, SSLs above the GPS were observed in MW-17A for calcium and TDS, and in wells MW-17A and MW-17C for sulfate.
- Monitoring was completed at a five-week frequency at the newly installed multi-level series at MW-19 and well MW-7D. To date, seven sampling events have been completed for the MW-19 series wells and three sampling events have been completed for well MW-7D.
- Further collection of data to assess remedy alternatives for the site including continued plume delineation to the north, an assessment of discharge alternatives, Tier 1 MNA evaluation of site contaminants of concern and collection of well solids to support a Tier II MNA evaluation, and collection of bulk samples for in-situ bench testing.

Notes:

ug/l - micrograms per liter.

mg/l = milligrams per liter.

su - standard pH units (pH is a field parameter)

pCi/L = picocuries per liter.

All metals were analyzed as total unless otherwise indicated.

Qualifiers:

U The analyte was analyzed for, but was not detected at, a level greater than or equal to the level of the adjusted reporting limit (RL) for the sample and method.

J The analyte was positively identified, and the associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain QC criteria were not met, or to the concentration of the analyte being below the RL).

J+ Same as J, and the reported concentration is potentially biased high.

J– Same as J, and the reported concentration is potentially biased low.

UJ The analyte was not detected at a level greater than or equal to the adjusted method detection limit (MDL). However, the reported adjusted MDL is approximate and might be inaccurate or imprecise.

R The sample results are unusable due to the quality of the data generated because certain criteria were not met. The analyte might or might not be present in the sample.

REVISION

The report being provided is a revision of the original report sent on 2/25/2025. The report (revision 3) is being revised due to Molybdenum added to list of metals..

Report revision history
Revision 2 - 7/26/2025 - Reason - Potassium and Sodium added to reporting list of 200.8 from Cleveland analysis..
Revision 1 - 4/2/2025 - Reason - Trip Blank sample ID should be 11 instead of 01..

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 1/25/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 0.2°C, 0.2°C, 0.4°C and 0.5°C.

Metals
Method 200.8_CWA: Due to sample matrix effect on the internal standard (ISTD), a dilution was required for the following sample: L501182-01 MW17A (240-218141-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Gas Flow Proportional Counter
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Rad
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

3.2 Sampling Procedures

Appendix D of the HMP provides the sample collection and safety procedures (HDR, 2021). These same procedures will be followed for collection of Assessment Monitoring samples. Procedures are consistent with EPA guidelines and R 299.4440-4445 and R 299.4905-4908 of the Part 115 rules. BWL or a Contracted Consultant (CC) will collect all samples.

3.2.1 Quality Control

Quality Control (QC) checks of both the field procedures and laboratory analyses are described in the HMP and the same process will be used to assess and document data quality for assessment monitoring as described in the HMP for background and detection monitoring data. Laboratory data will be reviewed, validated and qualified if necessary prior to use. The laboratory data validation procedure is described in Section 3.5 of the HMP.

3.3 Monitoring Parameters and Analytical Methods

3.3.1 Sample Parameters

Parameters to be analyzed for each semiannual assessment monitoring event are shown on Table 4. These parameters include all of the constituents required for groundwater sampling by the Part 115. Analytical testing of water samples will be performed by the BWL approved contract laboratory. Field measurements will be collected by the sampling team during the purging process. The field measurements are specific conductance, temperature, dissolved oxygen, pH, turbidity, and oxidation/reduction potential (ORP).

Qualifiers

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL, and the absolute difference between results is < the upper reporting limits for both.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Rad

Qualifier	Qualifier Description
G	The Sample MDC is greater than the requested RL.
U	Result is less than the sample detection limit.

REVISION

The report being provided is a revision of the original report sent on 3/11/2025. The report (revision 1) is being revised due to Potassium and Sodium added to reporting list of 200.8 from Cleveland analysis..

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 2/7/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 8 coolers at receipt time were 1.2°C, 1.7°C, 2.1°C, 2.1°C, 2.2°C, 2.6°C, 2.8°C and 3.1°C.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method 2540D: The sample duplicate (DUP) precision for analytical batch 240-644521 was outside control limits. Sample non-homogeneity is suspected.

Method 2540D: The sample duplicate (DUP) precision for analytical batch 240-644521 was outside control limits. Sample non-homogeneity is suspected.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Gas Flow Proportional Counter
Method 904.0: Radium 228 Batch 702326

The detection goal was not met for the following sample due to a reduced sample volume used in prep attributed to the presence of matrix interferences. L502153-10 MW-14 (240-218633-10)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Rad
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

REVISION

The report being provided is a revision of the original report sent on 3/11/2025. The report (revision 1) is being revised due to Potassium and Sodium added to reporting list of 200.8 from Cleveland analysis..

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 2/8/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 3.2°C, 3.8°C and 5.5°C.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method 2540D: The sample duplicate (DUP) precision for analytical batch 240-644566 was outside control limits. Sample non-homogeneity is suspected.

Method 2540D: The sample duplicate (DUP) precision for analytical batch 240-644566 was outside control limits. Sample non-homogeneity is suspected.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Gas Flow Proportional Counter
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Rad
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

REVISION

The report being provided is a revision of the original report sent on 4/2/2025. The report (revision 1) is being revised due to Potassium and Sodium added to reporting list of 200.8 from Cleveland analysis..

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 3/1/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 1.9°C, 2.9°C, 4.1°C and 5.5°C.

Metals
Method 200.8_CWA: Due to sample matrix effect on the internal standard (ISTD), a dilution was required for the following sample: L502194-02 MW-17B (240-219708-2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Gas Flow Proportional Counter
Method 904.0: Radium 228 batch 706366
The LCS recovered at (128%). The limits in our LIMS system at 75-125 reflect the requirements of a regulatory agency that represents a large amount of our work. However the samples associated with this LCS are not from this agency and are therefore held to our in-house statistical limits of (68-154%) per method requirements. The LCS passes, no further action is required (LCS 160-706366/2-A)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Rad
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

REVISION

The report being provided is a revision of the original report sent on 5/27/2025. The report (revision 1) is being revised due to Potassium and Sodium added to reporting list of 200.8 from Cleveland analysis..

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 4/26/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.6°C and 0.8°C.

Metals
Method 200.8_CWA: The method blank for preparation batch 350-6586 contained Zinc above the reporting limit (RL). None of the samples associated with this method blank contained the target compound; therefore, re-extraction and/or re-analysis of samples were not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Gas Flow Proportional Counter
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Rad
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

REVISION

The report being provided is a revision of the original report sent on 6/4/2025. The report (revision 1) is being revised due to Potassium and Sodium added to reporting list of 200.8 from Cleveland analysis..

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 5/14/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 2.9°C, 3.2°C and 3.6°C.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative
240-224360-2

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 5/14/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 2.9°C, 3.2°C and 3.6°C.

Gas Flow Proportional Counter
Method 904.0: Radium-228 batch 717725
The detection goal was not met for the following sample due to the reduced sample volume used in prep attributed to the presence of matrix interferences: L505202-04 MW-19D (240-224360-4). Analytical results are reported with the detection limit achieved.

Method 904.0: Radium 228 batch 718191
The LCS recovered at (128%). The limits in our LIMS system at 75-125 reflect the requirements of a regulatory agency that represents a large amount of our work. However the samples associated with this LCS are not from this agency and are therefore held to our in-house statistical limits of (68%-154%) per method requirements. The LCS passes, no further action is required

(LCS 160-718191/2-A)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Rad
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

REVISION

The report being provided is a revision of the original report sent on 6/30/2025. The report (revision 1) is being revised due to Potassium and Sodium added to reporting list of 200.8 from Cleveland analysis..

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 5/31/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.2°C and 2.7°C.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Gas Flow Proportional Counter
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Rad
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

REVISION

The report being provided is a revision of the original report sent on 7/1/2025. The report (revision 1) is being revised due to Potassium and Sodium added to reporting list of 200.8 from Cleveland analysis..

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 6/19/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.6°C and 1.1°C.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative
240-228528-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 7/10/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.0°C and 1.4°C.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method 2540D: The sample duplicate (DUP) precision for analytical batch 240-663433 was outside control limits. Sample non-homogeneity is suspected.

Method 300.0_28D: The volume of spiking solution was inadvertently not added to the matrix spike (MS), and matrix spike duplicate (MSD) associated with analytical batch 240-663480.

Job Narrative
240-228528-2

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 7/10/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.0°C and 1.4°C.

Gas Flow Proportional Counter
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Rad
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative
240-229387-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 7/24/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.7°C and 3.2°C.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative
240-229387-2

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 7/24/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.7°C and 3.2°C.

Gas Flow Proportional Counter
Method 903.0: Radium 226 Prep Batch 160-732823

Insufficient sample volume was available to perform a sample duplicate for the following samples: L507255-05 MWT-19A (240-229387-5). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

Method 904.0: Radium 228 Prep Batch 160-732825

Insufficient sample volume was available to perform a sample duplicate for the following samples: L507255-05 MWT-19A (240-229387-5). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Rad
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative
240-230293-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 8/7/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.5°C.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.
