Job Narrative
240-230293-2

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 8/7/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.5°C.

Gas Flow Proportional Counter
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Rad
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Qualifiers

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL, and the absolute difference between results is < the upper reporting limits for both.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Job Narrative
240-230513-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 8/9/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 0.5°C, 0.6°C, 0.9°C and 3.9°C.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method 2540D: The sample duplicate (DUP) precision for analytical batch 240-667340 was outside control limits. Sample non-homogeneity is suspected.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative
240-230513-2

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 8/9/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 0.5°C, 0.6°C, 0.9°C and 3.9°C.

Gas Flow Proportional Counter
Method 904.0: Radium 228 Batch 731801

The Radium-228 laboratory control sample (LCS) associated with the following samples recovered at 131%: (LCS 160-731801/2-A). The limits in our LIMS system at (75-125%) reflect the requirements of a regulatory agency that represents a large amount of our work. However the samples associated with this LCS are not from this agency and are therefore held to our in-house statistical limits of (68-154%). The LCS is within criteria and no further action is required.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Rad
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Qualifiers

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL, and the absolute difference between results is < the upper reporting limits for both.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Job Narrative
240-230530-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 8/9/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 0.6°C, 0.7°C, 2.9°C and 4.6°C.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method 2540D: The sample duplicate (DUP) precision for analytical batch 240-667308 was outside control limits. Sample non-homogeneity is suspected.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative
240-230530-2

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 8/9/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 0.6°C, 0.7°C, 2.9°C and 4.6°C.

Gas Flow Proportional Counter
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Rad
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Qualifiers

Metals

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Job Narrative
240-230600-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 8/12/2025 9:50 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 2.9°C, 5.3°C and 5.9°C.

Metals
Method 200.8 - Total Recoverable: The laboratory control sample (LCS) for preparation batch 240-667493 and analytical batch 240-667773 recovered outside control limits for thallium. This analyte was biased high in the LCS and were below the reporting limit in the associated samples; therefore, the data has been reported. L508232-08 MWT-7 (240-230600-8) and L508232-09 FIELD BLANK (240-230600-9)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative
240-230600-2

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 8/12/2025 9:50 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 2.9°C, 5.3°C and 5.9°C.

Gas Flow Proportional Counter
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative
240-230809-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 8/14/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.8°C and 1.1°C.

Metals
Method 200.8 - Total Recoverable: The laboratory control sample (LCS) for preparation batch 240-667889 and analytical batch 240-668199 recovered outside control limits for the following analytes: Lead and Thallium. These analytes were biased high in the LCS and were below the reporting limit in the associated samples; therefore, the data have been reported. L508239-01 MW-4 (240-230809-1), L508239-02 MW-16A (240-230809-2), L508239-03 MW-16B (240-230809-3), L508239-04 MW-16C (240-230809-4), L508239-05 MW-16D (240-230809-5), L508239-06 MWT-4 (240-230809-6) and L508239-07 FIELD BLANK (240-230809-7)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative
240-230809-2

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 8/14/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.8°C and 1.1°C.

Gas Flow Proportional Counter
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Rad
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative
240-231817-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 8/28/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.5°C and 2.4°C.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method 2540D: Insufficient sample volume was available to perform a sample duplicate (DUP) associated with analytical batch 240-669866.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative
240-231817-2

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 8/28/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.5°C and 2.4°C.

Gas Flow Proportional Counter
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Rad
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative
240-232981-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 9/13/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.0°C and 1.8°C.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method 2540D: The sample duplicate (DUP) precision for analytical batch 240-671723 was outside control limits. Sample non-homogeneity is suspected.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative
240-232981-2

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 9/13/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.0°C and 1.8°C.

Gas Flow Proportional Counter
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Rad
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative
240-234327-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 10/2/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.1°C and 1.3°C.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative
240-234327-2

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 10/2/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.1°C and 1.3°C.

Gas Flow Proportional Counter
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Rad
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative
240-237026-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 11/6/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.8°C and 1.0°C.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative
240-237026-2

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 11/6/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.8°C and 1.0°C.

Gas Flow Proportional Counter
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Rad
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

REVISION

The report being provided is a revision of the original report sent on 12/2/2025. The report (revision 1) is being revised due to Sample IDs updated per client request..

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 11/19/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.7°C and 1.0°C.

Metals
Method 200.8_CWA - Dissolved: The following samples were diluted due to the abundance of non-target analytes: L511199-01 MW-6 (240-238040-1), L511199-02 MW-7C (240-238040-2), L511199-03 MW-7D (240-238040-3), L511199-04 MW-14 (240-238040-4), L511199-05 MW-17A (240-238040-5), L511199-06 MW-17B (240-238040-6), L511199-07 MW-17C (240-238040-7), L511199-08 MW-17D (240-238040-8), L511199-09 MW-17E (240-238040-9), L511199-10 MWT-17A (240-238040-10) and L511199-11 Field Blank (240-238040-11). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method 300: The following sample(s) was received with less than 2 days remaining on the holding time or less than one shift (8 hours) remaining on a test with a holding time of 48 hours or less. As such, the laboratory had insufficient time remaining to perform the analysis within holding time: L511199-10 MWT-17A (240-238040-10) and L511199-11 Field Blank (240-238040-11).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative
240-238165-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 11/20/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.1°C and 1.8°C.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

Method SM4500_NO3_D: The following sample was analyzed outside of analytical holding time due to lab oversight: L511203-01 MW-3 (240-238165-1).

Method SM4500_NO3_D: The following samples were diluted due to the presence of a precipitate which interferes with Nitrate: L511203-01 MW-3 (240-238165-1), L511203-02 MW-5 (240-238165-2), L511203-06 MW-18C (240-238165-6) and L511203-07 MW-18D (240-238165-7). Elevated reporting limits (RLs) are provided.

Method SM4500_NO3_D: Due to analyst error the MS/MSD samples were run at different dilutions and cannot link to the appropriate parent sample.

Job Narrative
240-238294-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 11/21/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 3.0°C.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method SM4500_NO2_B: The following sample was analyzed outside of analytical holding time due to lab oversight: L511206-05 Field Blank (240-238294-5).

Method SM4500_NO3_D: The following samples were analyzed outside of analytical holding time due to lab oversight: L511206-01 MW-2 (240-238294-1) and L511206-02 MW-12 (240-238294-2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Comments:

All samples were analyzed for total iron and zinc by EPA Method E200.7 and E200.8. Historical data for the site have been analyzed via EPA Method E200.8. To keep analytical results consistent with historical data, results analyzed by EPA method E200.7 were rejected.

The RPDs of Rad-228 and Combined Rad-226+228 were outside of control limits for the MW-17A and MWT-17A parent sample and field duplicate pair. Rad-226 and Combined Rad-226+228 required qualification in parent sample MW-17A as estimated with low bias (J-) and in field duplicate MWT-17A as estimated with high bias (J+).

Comments:

All samples were analyzed for total zinc by EPA Method E200.7 and E200.8. Historical data for the site have been analyzed via EPA Method E200.8. To keep analytical results consistent with historical data, results analyzed by EPA method E200.7 were rejected.

The RPDs of Rad-226, Rad-228, and Combined Rad-226+228 were outside of control limits for the MW-3 and MWT-3 parent sample and field duplicate pair. Rad-226 required qualification as estimated with high

bias (J+) in parent sample MW-3 and as estimated with low bias (J-) in field duplicate MWT-3. Rad-228 and Combined Rad-226+228 required qualification as estimated with low bias (J-) in parent sample MW-3 and as estimated with high bias (J+) in field duplicate MWT-3.

The RPDs of cadmium, zinc, Rad-226, Rad-228, and Combined Rad-226+228 were outside of control limits for the MW-6 and MWT-6 parent sample and field duplicate pair. Cadmium, zinc, and Rad-226 required qualification as estimated with high bias (J+) in parent sample MW-6 and as estimated with low bias (J-) in field duplicate MWT-6. Rad-228 and Combined Rad-226+228 required qualification as estimated with low bias (J-) in parent sample MW-6 and as estimated with high bias (J+) in field duplicate MWT-6.

Silver was not detected in parent sample MW-100C, but was detected in field duplicate MWT-100C. Silver required qualification as estimated but not detected (UJ) in parent sample MW-100C and as estimated with high bias (J+) in field duplicate MWT-100C.

Zinc was detected in parent sample MW-100C, but was not detected in field duplicate MWT-100C. Zinc required qualification as estimated with high bias (J+) in parent sample MW-100C and as estimated but not detected (UJ) in field duplicate MWT-100C.

Lead and selenium were detected in parent sample MW-18A, but were not detected in field duplicate MWT-18A. Lead and selenium required qualification as estimated with high bias (J+) in parent sample MW-18A and as estimated but not detected (UJ) in field duplicate MWT-18A.

The RPDs of TSS, Rad-228, and Combined Rad-226+228 were outside of control limits for the MW-18A and MWT-18A parent sample and field duplicate pair. TSS required qualification as estimated with low

bias (J-) in parent sample MW-18A and as estimated with high bias (J+) in field duplicate MWT-18. Rad-228 and Combined Rad-226+228 required qualification as estimated with high bias (J+) in parent sample MW-18A and as estimated with low bias (J-) in field duplicate MWT-18A.

Comments:

MW-19B was not fully stabilized for DO (>10% change within last 3 measurements). MW-19D was not fully stabilized for turbidity (>10 NTU within last 3 measurements). Additionally, the field forms used show incorrect stabilization criteria for specific conductance and turbidity (refer to site Groundwater Monitoring Plan).

No equipment blank sample was collected.

The matrix spike recovery was low for calcium (68%) in L506251-01 MW-19AMS. Therefore, calcium was qualified as estimated with low bias (J-) in parent sample MW-19A.

The LCS recovery was high for radium-228 (127%) in LCS 160-7238542-A. Therefore, radium-228 was qualified as estimated with high bias (J+) in batch samples with detections (MW-19B, MW-19D, and MWT-19A).

The RPDs of radium-226 and radium-226/228 were outside of control limits (94% and 35%, respectively) for the MW-19A and MWT-19A parent sample and field duplicate pair. Therefore, radium-226 and radium-226/228 were qualified as estimated (J) in samples MW-19A and MWT-19A.

Comments:

The RPDs of arsenic, cadmium, cobalt, radium-226, radium-228, radium-226/228, selenium, thallium, and TSS were outside of control limits for the MW-17A and MWT-17A parent sample and field duplicate pair. Arsenic, cadmium, cobalt, radium-226, radium-226/228, selenium, and thallium were qualified as estimated with high bias (J+) in parent sample MW-17A and as estimated with low bias or estimated but not detected (J-, UJ) in duplicate sample MWT-17A. TSS was qualified as estimated with low bias (J-) in parent sample MW-17A and as estimated with high bias (J+) in

duplicate sample MWT-17A. Radium-228 was qualified as estimated but not detected (UJ) in both parent sample MW-17A and duplicate sample MWT-17A.

Arsenic, zinc, and TSS were qualified as estimated with high bias (J+) in parent sample MW-18A and as estimated with low bias or estimated but not detected (J-, UJ) in duplicate sample MWT-18A.

Matrix spike recoveries were low (0%) for L507211-06 FIELD BLANKMS for chloride, fluoride, and sulfate. The lab report case narrative states that the spiking solution was omitted by accident. Therefore, the chloride, fluoride, and sulfate of the parent field blank sample were qualified as estimated but not detected (UJ).

Cobalt was detected above MDL in parent sample MW-19A but was not detected above MDL in field duplicate MWT-19A. Cobalt required qualification as estimated with high bias (J+) in parent sample MW-19A and as estimated but not detected (UJ) in field duplicate MWT-19A.

Radium-228 and radium-226/228 were detected above MDL in field duplicate MWT-19A but were not detected above MDL in parent sample MW-19A. Radium-228 and radium-226/228 required qualification as estimated but not detected in parent sample MW-19A and as estimated with high bias (J+) in field duplicate MWT-19A.

The RPDs of fluoride and radium-226 were also outside of control limits for the MW-19A and MWT-19A parent sample and field duplicate pair. Fluoride required qualification as estimated with low bias (J-) in parent sample MW-19A and as estimated with high bias (J+) in field duplicate MWT-19A. Radium-226 required qualification as estimated with high bias (J+) in parent sample MW-19A and as estimated with low bias (J-) in field duplicate MWT-19A.

Iron was detected in method blank MB 350-843825-A above MDL but below RL. Lab applied B qualifier to iron results in analysis batch 8518. Radium-228 was detected in method blank MB 160-7328251-A above MDL but below RL.

Matrix Spike L508287-01 MW-19AMS recovery for iron was reported as 128% on lab EDD. However, original concentration is shown as 5.3 mg/L, spike added is shown as 20 mg/L, and spike measured is shown as 25.7 mg/L. This indicates a spike recovery of 102%, which is inside of control limits.

The RPD of Rad-226, Rad-228, and Combined Rad-226+228 were outside of control limits for the MW-17A and MWT-17A parent sample and field duplicate pair. Rad-226, Rad-228, and Combined Rad-226+228 required qualification as estimated with high bias (J+, or UJ if non-detect) in parent sample MW-17A and as estimated with low bias (J-, or UJ if non-detect) in field duplicate MWT-17A.

The RPDs of iron, Rad-226, Rad-228, Combined Rad-226+228, and TSS were outside of control limits for the MW-6 and MWT-6 parent sample and field duplicate pair. Iron, Rad-228, and TSS required qualification as estimated with high bias (J+, or UJ if non-detect) in parent sample MW-6 and as estimated with low bias (J-, or UJ if non-detect) in field duplicate MWT-6. Rad-226 and Combined Rad-228+228 required qualification as estimated with low bias (J-, or UJ if non-detect) in parent sample MW-6 and as estimated with high bias (J+) in field duplicate MWT-6.

Radium-228, radium-226/228, and zinc were detected in parent sample MW-17A but were not detected in field duplicate sample MWT-17A. Radium-228, radium-226/228, and zinc required qualification as estimated with high bias (J+) in parent sample MW-17A and as estimated but not detected (UJ) in field duplicate sample MWT-17A.

The RPDs of arsenic and TSS were outside of control limits for the MW-17A and MWT-17A parent sample and field duplicate pair. Arsenic and TSS required qualification as estimated with low bias (J-) in parent sample MW-17A and as estimated with high bias (J+) in field duplicate MWT-17A.

Cobalt was detected in method blank MB 240-6717111-A above the method detection limit but below the reporting limit. The lab qualified the cobalt detection in sample MW-17C as detected in both the sample and blank (B), accordingly. Bicarbonate alkalinity as CaCO3 was detected in method blank MB 240-6718814 above the method detection limit but below the reporting limit. A second method blank MB 240-67188133 was analyzed and bicarbonate alkalinity as CaCO3 was not detected above the method detection limit.

Comments:

Cadmium and radium-226 were detected in parent sample MW-19A but were not detected in field duplicate MWT-19A. Cadmium and radium-226 required qualification as estimated with high bias (J+) in parent sample MW-19A and as estimated but not detected (UJ) in field duplicate MWT-19A.

Radium-226/228 was not detected in parent sample MW-19A but was detected in field duplicate MWT-19A. Radium-226/228 required qualification as estimated but not detected (UJ) in parent sample MW-19A and as estimated with high bias (J+) in field duplicate MWT-19A.

The RPD of molybdenum between parent sample MW-19A and field duplicate MWT-19A was outside of control limits. Molybdenum required qualification as estimated with high bias (J+) in parent sample MW-19A and as estimated with low bias (J-) in field duplicate MWT-19A.
