This report serves as the Annual Coal Combustion Residuals Fugitive Dust Control Report prepared in accordance with 40 CFR Part 257.80(c). It outlines measures implemented at the Lansing Board of Water & Light’s Erickson Station Pond System to minimize fugitive dust emissions from coal combustion residuals (CCR). Erickson Station is located at 3725 South Canal Road, Lansing, Michigan and is a 165 megawatt coal fired electric generating power plant.

Fugitive Dust Control Activities

All of the measures described in the Erickson Station Fugitive Dust Control Plan for Coal Combustion Residuals were followed during this reporting period, October 1, 2015 to December 31, 2016.

Citizen Complaints

On August 26, 2016, BWL received a Violation Notice following an on-site inspection from the Michigan Department of Environmental Quality, Air Quality Division (AQD) for the Millet Highway Fly Ash Handling and Storage Facility located adjacent to the Erickson Station. At the time of the site visit, the AQD noted some general housekeeping issues around some of the dust collectors and the mass storage building. They also noted that daily inspection checklists were not consistently filled out by plant personnel for one of the dust collectors. BWL immediately addressed housekeeping issues and conducted training for applicable plant staff. The issue was closed by the AQD and no problems have been noted since.

Corrective Actions

There were no specific corrective actions taken during this reporting period, October 1, 2015 to December 31, 2016.
